

## Borland Caliber RM Essentials; Administration

The Borland Caliber RM Essentials: Administration training course is a one day tool-oriented course that provides hands-on training for anyone managing a [Borland Caliber RM](#) software installation. The focus will be on the project and server tasks necessary to administer the product software and repository. To accomplish these tasks, you will use the Borland Caliber RM Requirements Management module and the Borland Caliber RM Administrator module.

### What will I learn on the Borland Caliber RM Essentials: Administration training course?

During the Borland Caliber RM Essentials: Administration training course, you will learn the underlying Borland Caliber RM product architecture and be able to develop a comprehensive security strategy for groups and users. You will also learn how to define reliable repository backup and recovery procedures and how to create custom reusable objects for use in Borland Caliber RM projects. In addition, you will learn how to migrate data in or out of Borland Caliber RM with the import and export functionality.

After completing this course, you will be able to effectively administer your Borland Caliber RM software installation.
